

AP Statistics Summer Homework 2021-2022 School Year

Welcome to AP Statistics! My name is Robert Beyronneau. You may call me Mr. Beyronneau (bear-a-no), or just use “Mr. B” which is what most students do.

I am REALLY looking forward to next year’s class, especially after being in quarantine all these months. Usually I would be assigning a big project to get you collecting data and writing reports using statistics as your summer assignment, however, with no idea how much of a summer you all are going to get, basically the summer assignment this year will be just setting up google classroom and REMIND.

I am choosing to do this, this summer, because hopefully, we will be released into the real world at some point and I need all of you to get out and enjoy your summer with your friends and family and not worry about gathering data quite yet. We should have an incredibly interesting year ahead of us with tons of naturally occurring data from COVID-19, to the return of professional sports, to vaccination data. I love teaching statistics because it truly is fun and interesting and hopefully as we work together to get prepared for the AP Exam, you too, will find statistics just as interesting. So here are the only things you need to do for the AP Statistics summer assignment:

1. You will need to add yourself to my google classroom. **Go to:** <http://classroom.google.com>
You’ll need to add the class with the class code: **c3red3u**

Here I will be able to keep you updated on assignments throughout the year.

2. Everyone should also join my REMIND Account for the class that way you can get reminders to help you stay on top of things, REMIND also allows you to ask me questions:

To join text @chuEwRhome to 81010.

Thank you once again for getting these two things done ASAP,

I look forward to an exciting and brave new world,
which we will be returning to this upcoming school year.
